

AS A LANDHOLDER, CONTROLLING FERAL PIGS IS YOUR RESPONSIBILITY

Biosecurity Risk

Feral pigs are a priority pest animal in the Hunter Region because of the negative impact they have on agricultural and natural environments. Feral pig populations occur in different numbers across NSW. Under the *NSW Biosecurity Act 2015* every landholder has a General Biosecurity Duty (GBD) to reduce risks caused by feral pigs by undertaking control activities.

How do I know if feral pigs are present?

To determine if feral pigs are present look for visible sightings, predation of lambs, rooting (digging of soil for underground food such as roots and bulbs), crop and fence damage, pads (a feral pig game trail), tracks and scats, wallows (indentations in waterbodies), mud rubs and tusk marks on vegetation and infrastructure and nests.

Follow the steps below if you believe feral pigs to be on your property
